🖥️ ASSIGNMENT 1: BASICS OF WINDOWS SERVER AND ACTIVE DIRECTORY

✅ Task 1

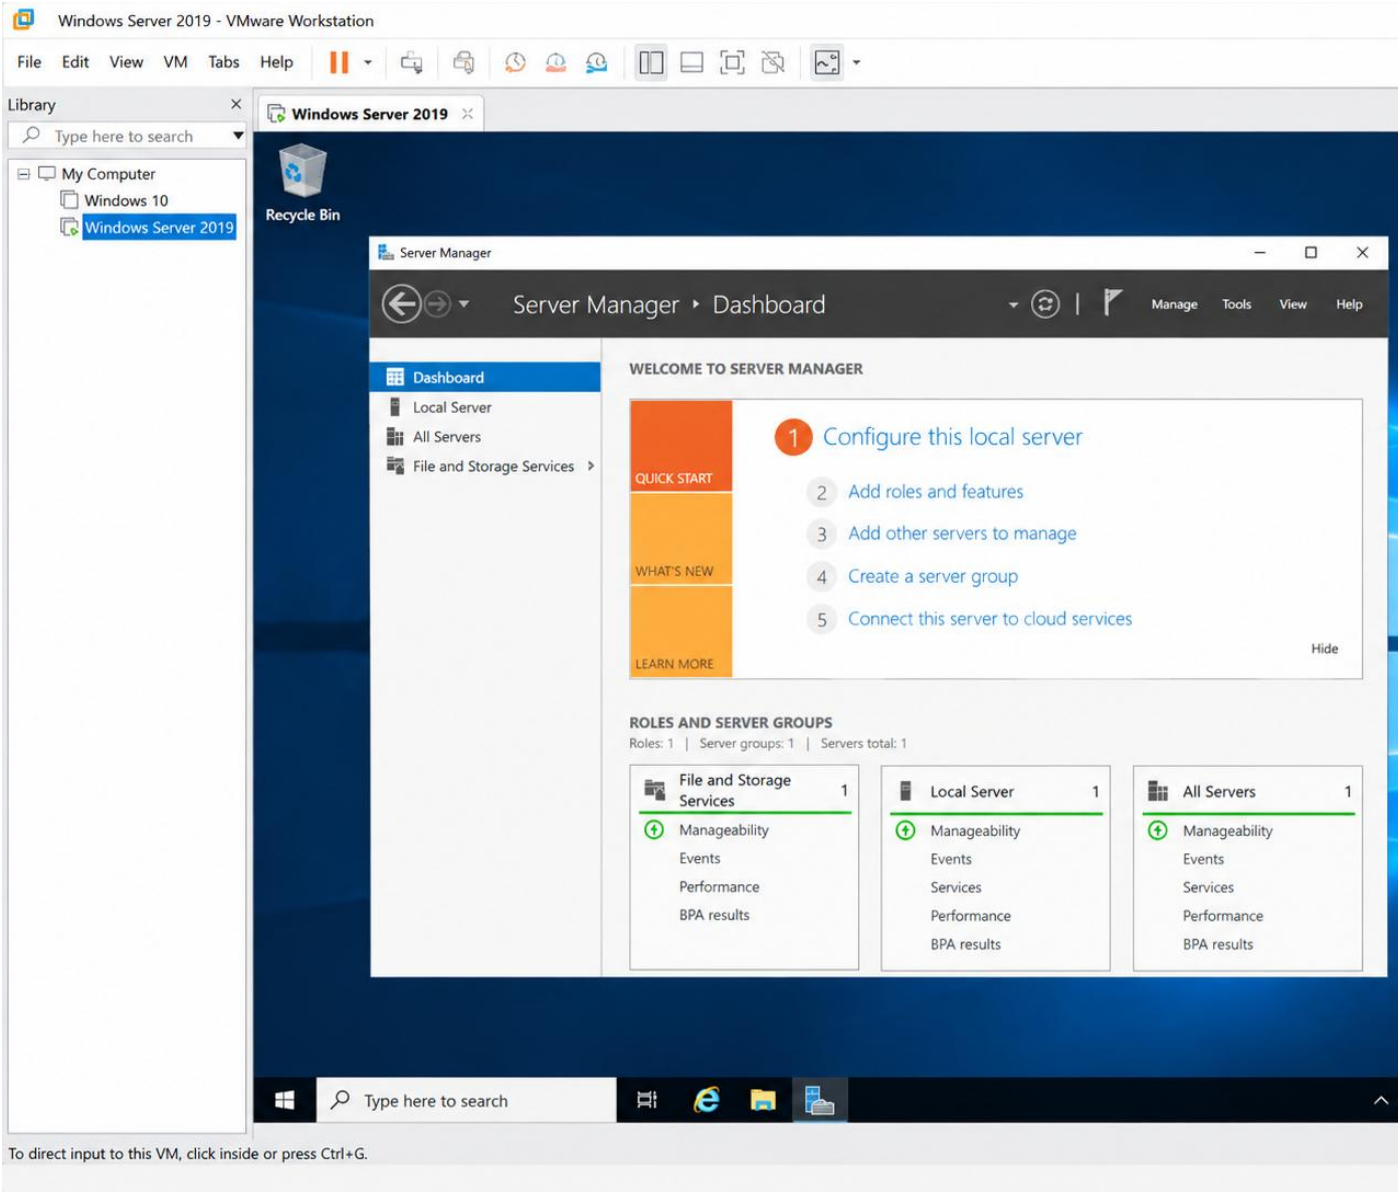

Question: Install Windows Server on a virtual machine using VirtualBox or VMware and take a screenshot of the desktop after the installation completes.

Answer:

Steps:

1. Open VMware Workstation or VirtualBox.
2. Create a new virtual machine.
3. Select the Windows Server ISO file.
4. Assign the required RAM, CPU cores, and virtual disk space.
5. Start the virtual machine and follow the Windows Setup wizard.
6. Select the required Windows Server edition and complete the installation.
7. Set the Administrator password.
8. Log in to Windows Server and open the desktop.

📸 **Screenshot 1:** Windows Server desktop after installation.

Result: Windows Server was successfully installed on a virtual machine.

✅ Task 2

Question: Open Server Manager and use the 'Add roles and features' wizard to install the Active Directory Domain Services (AD DS) role. Document each step with a short description and screenshot.

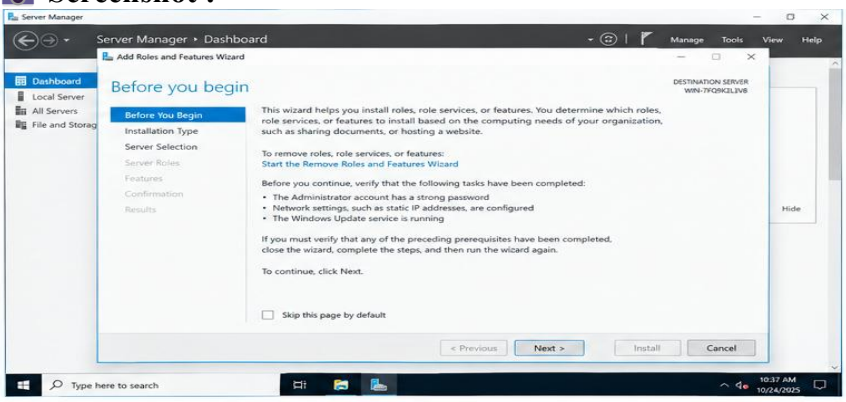

Answer:

Steps:

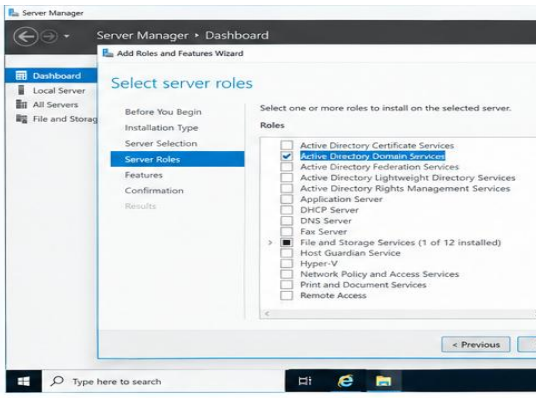

1. Log in to Windows Server using the Administrator account.
2. Open **Server Manager**.

3. Click **Manage → Add Roles and Features**.
4. Click **Next** on the Before You Begin page.
5. Select **Role-based or feature-based installation** and click Next.
6. Select the local server from the server pool and click Next.
7. Select **Active Directory Domain Services (AD DS)**.
8. Click **Add Features** when prompted.
9. Click Next through the Features and AD DS information pages.
10. Click **Install** and wait for the installation to finish.

Screenshot 3 — Select server roles: Active Directory

Screenshot 4 — Installation progress / results

Result: The Active Directory Domain Services role was successfully installed.

✅ Task 3

Question: Promote your Windows Server to a Domain Controller by creating a new forest with a root domain name of your choice (e.g., mycollege.local). List the options you selected during the configuration.

Answer:

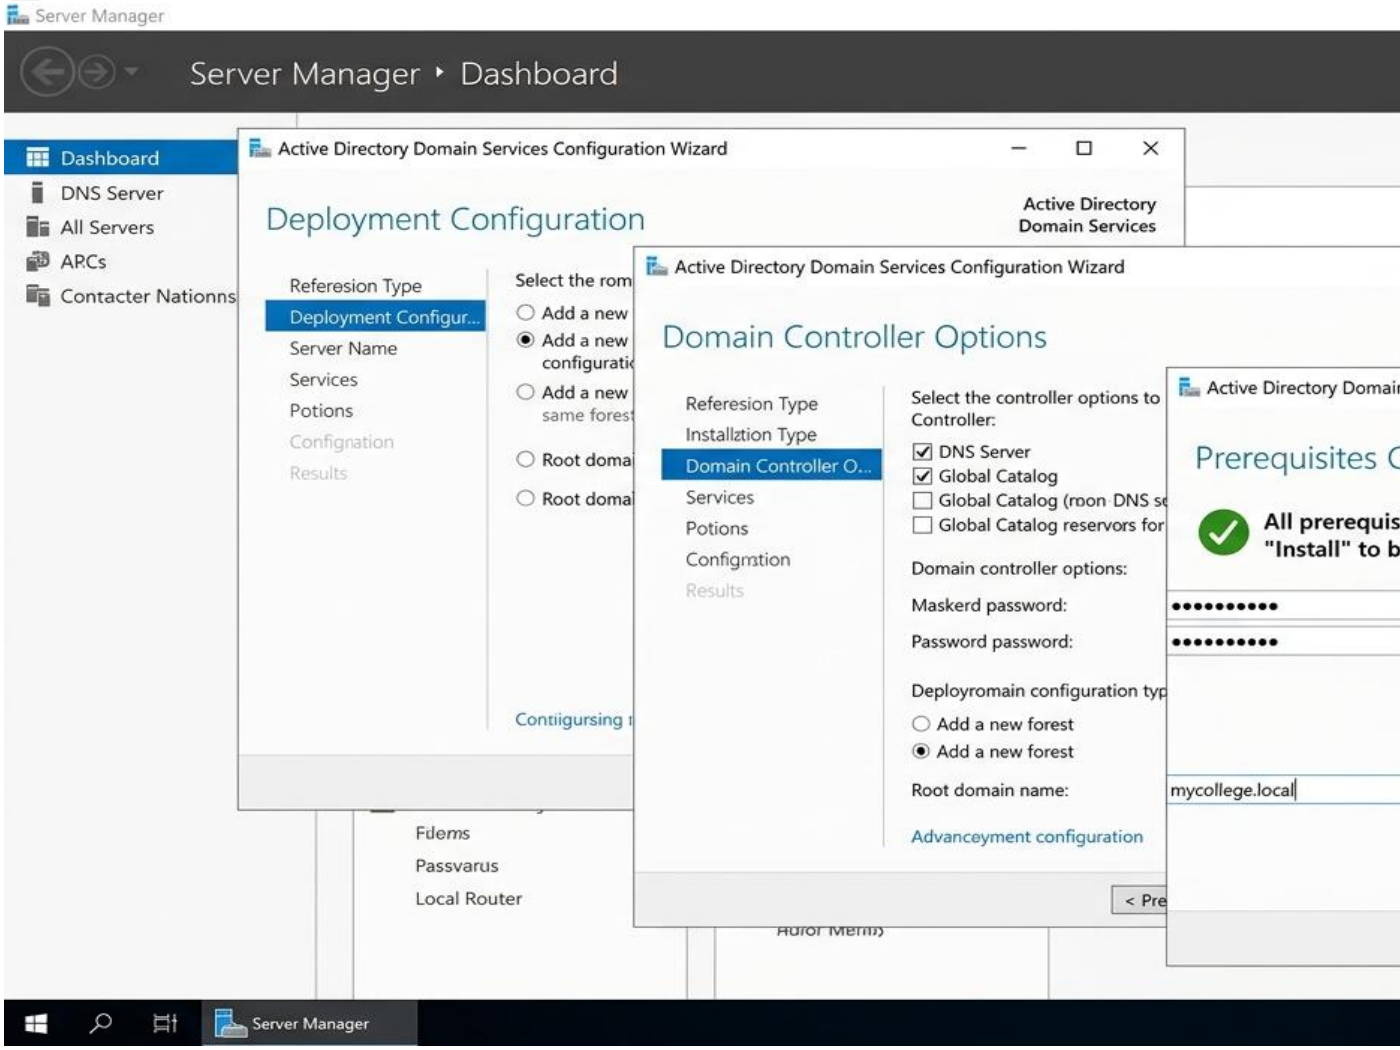

Steps:

1. Open **Server Manager**.
2. Click the notification flag in the top-right corner.
3. Select **Promote this server to a domain controller**.
4. Select **Add a new forest**.
5. Enter the root domain name: `mycollege.local`
6. Click Next.
7. Select the required forest and domain functional levels supported by your Windows Server version.
8. Keep **DNS Server** and **Global Catalog (GC)** selected.
9. Set a Directory Services Restore Mode (DSRM) password.
10. Confirm the suggested NetBIOS domain name.
11. Keep the default database, log, and SYSVOL paths.
12. Click Next through the remaining pages.
13. Wait for the prerequisite check to complete.
14. Click **Install**.
15. After the server restarts, sign in using the domain Administrator account.

Configuration Options Selected

Option	Selected value
Deployment operation	Add a new forest
Root domain name	`mycollege.local`
DNS Server	Selected
Global Catalog	Selected
DSRM password	Set during configuration
NetBIOS name	`MYCOLLEGE` (confirm in wizard)
Database, log and SYSVOL paths	Default paths

Screenshot

Result: The Windows Server was successfully promoted to a Domain Controller for the `mycollege.local` domain.

✅ Task 4

Question: Create two new user accounts and one group in Active Directory Users and Computers. Assign both users to the group and describe how you did it.

Hint: Use the 'Users' container and right-click options in ADUC.

Answer:

We will create two user accounts named **Rahul** and **Priya**, and a security group named **IT_Group**.

A. Open Active Directory Users and Computers

1. Open Server Manager.
2. Click **Tools → Active Directory Users and Computers**.
3. Expand the domain `mycollege.local`.
4. Click the **Users** container.

B. Create User 1: Rahul

1. Right-click the Users container.
2. Select **New → User**.
3. Enter the first name: `Rahul`.
4. Enter the user logon name: `rahul`.
5. Click Next.
6. Set a strong password.
7. Select the required password options.
8. Click **Next → Finish**.

C. Create User 2: Priya

1. Right-click the Users container.
2. Select **New → User**.
3. Enter the first name: `Priya`.
4. Enter the user logon name: `priya`.
5. Click Next.
6. Set a strong password.
7. Select the required password options.
8. Click **Next → Finish**.

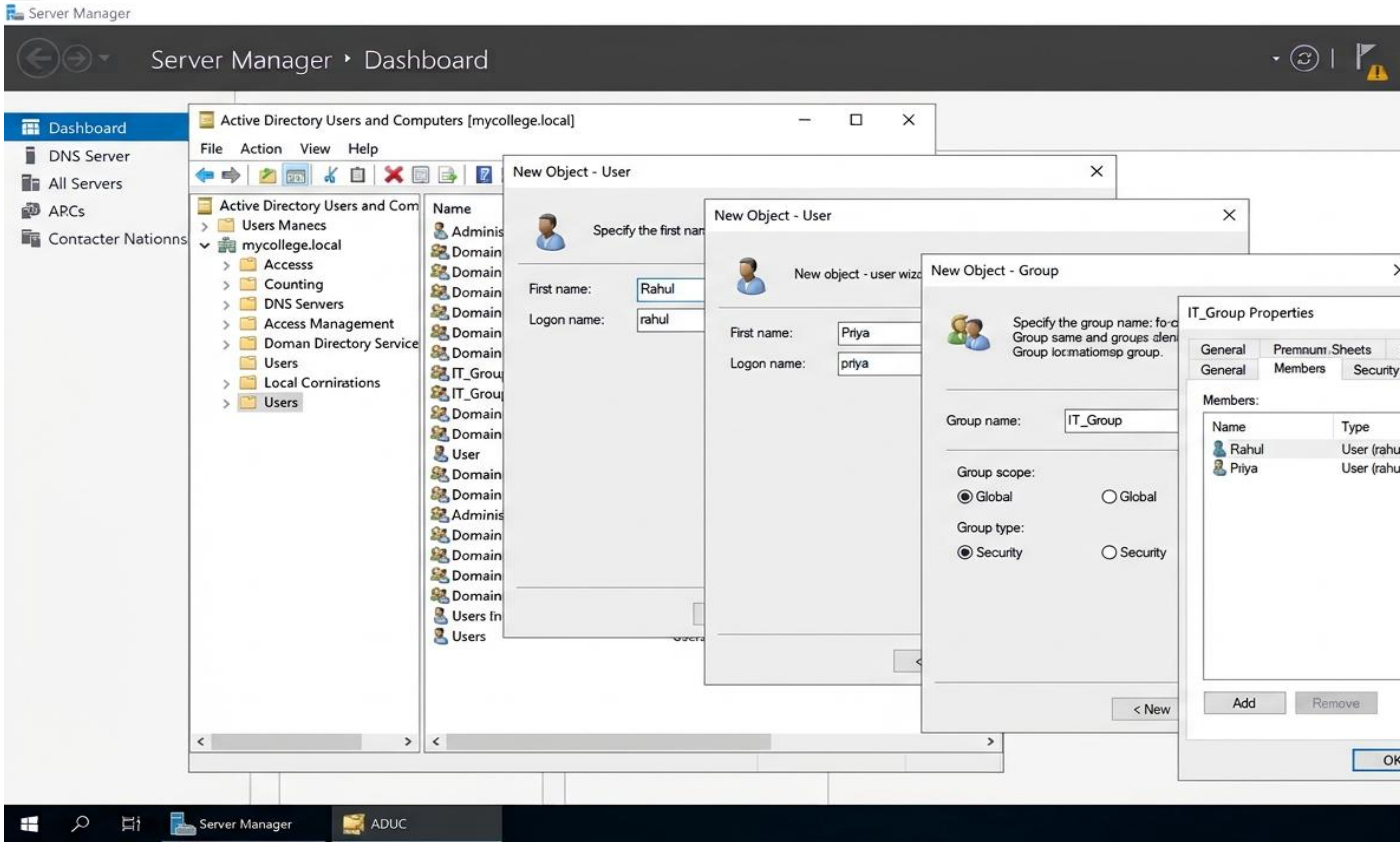

D. Create a Security Group

1. Right-click the Users container.
2. Select **New → Group**.
3. Enter the group name: `IT_Group`.
4. Select **Global** as the group scope.
5. Select **Security** as the group type.
6. Click OK.

E. Add Both Users to the Group

1. Right-click `IT_Group`.
2. Select **Properties**.
3. Open the **Members** tab.
4. Click **Add**.
5. Enter `Rahul` and click **Check Names**.
6. Repeat the process for `Priya`.
7. Click **OK → Apply → OK**.
8. Reopen the Members tab and verify that both users are listed.

Screenshot

Result: Two user accounts, Rahul and Priya, and one security group, IT_Group, were created successfully. Both users were added to the group.

Conclusion

In this practical, Windows Server was installed on a virtual machine, the AD DS role was installed, and the server was promoted to a Domain Controller by creating a new forest. Two user accounts and one security group were created in Active Directory Users and Computers, and both users were added to the group.

This practical helped me understand the basic configuration and administration of Active Directory Domain Services.
